Proceedings of the Indian Academy of Sciences

(Chemical Sciences)

Volume 95, 1985

CONTENTS

Special number in memory of the Late Prof. R. Srinivasan

Two-dimensional nuclear Overhauser effect in biomolecules *Anil Kumar* 1–8

Some applications of ^{13}C NMR spectroscopy in heterocyclic structure assignments *K Nagarajan* 9–19

Proton NMR studies of peptide conformations *P Balaram* 21–38

Observation of a plastic crystalline phase in solid MBBA *S Armugam, S V Bhat, N Kumar, K V Ramanathan and R Srinivasan* 39–47

Multiple liquid crystals and NMR *C L Khetrapal* 49–57

NMR imaging: Mathematical modelling and spectrometer design considerations *P Raghunathan, S Krishnan and K R Srivathsan* 59–75

Recent trends in the study of switching processes in ferroelectrics *R Ravi and P S Narayanan* 77–92

Structural phase transitions and superconductivity in hexagonal tungsten bronzes *J Ranninger and K P Sinha* 93–102

Paramagnetic probes in membrane biophysics *M B Sankaram and K R K Eswaran* 103–115

Heisenberg spin exchange and chemical electron exchange in naphthalene negative ion—An electron spin-lattice relaxation study *Ranjan Das and Balu Venkataraman* 117–128

On the indirect determination of ESR g-factors by NMR of paramagnetic crystals *D Srinivas and S Subramanian* 129–139

Ligand hyperfine and exchange interactions in a low-spin d^7 system *E Balasubramanian and P T Manoharan* 141–157

Electron spin resonance studies of distorted octahedral ruthenium(III) species *Samaresh Bhattacharya and Animesh Chakravorty* 159–167

Electron spin resonance of transition metal ions in glasses *K J Rao and B G Rao* 169–188

Electronic structure of spin-mixed iron(III) porphyrins: A proton magnetic resonance study *L B Dugar, V R Marathe and Samaresh Mitra* 189–205

Mössbauer spectroscopy of ion-bombarded material surfaces *S B Ogale, S V Ghaisas, S M Kanetkar and V G Bhide* 207–227

Inorganic and Analytical

Lanthanide perchlorate complexes of quinoline-1-oxide and isoquinoline-2-oxide *R Kalyanasundaram, N S Navaneetham and S Soundararajan* 235–242

Chemistry of the diphenyldithiophosphinato complexes of iron *N Mani and Johnson D Koola* 243–248

Absorption spectral studies on the adduct formation between $U(TTA)_4$ and some neutral donors *S N Pattanaik, D G Phal, V V Ramakrishna and S K Patil* 249–253

Study of the probable reason why Ni(II) is excluded from metalloenzymes *P K Bhattacharya, P J Patel and V K Patel* 255–263

Synthesis and analytical properties of the 5,5′-dithiodisalicyl-hydroxamic acid *F Salinas, J L Martínez-Vidal and J González-Parra* 265–274

Organophosphonic acids as complexons, Part III: *o*-Phenylenediamine-N,N,N′,N′-tetrakis-and ethylene diamine. N,N′-*bis*-(methylenephosphonic) acids as complexing agents *N Palta, B Venkateswara Rao, S N Dubey and D M Puri* 321–326

A polarographic study of zinc-thiocyanate complexes in mixed solvents *J Rangarajan and R Sundaresan* 327–331

Synergism in the extraction of lanthanides, copper and thorium in presence of HTTA and antipyrine *R K Malhotra and M Sudersanan* 333–336

Use of aqueous DMSO in resolving 'proton ambiguity' in the formation of monocomplexes of iron(III) *G Krishnamoorthy and B S Prabhananda* 337–344

Preparation, characterization and thermal analysis of metal hydrazinocarboxylate derivatives *P Ravindranathan and K C Patil* 345–356

Determination of stability constants from diffusion coefficient data *P N Gupta and Anju Raina* 517–524

Magnetic and spectral studies of 3d-metal complexes of acetone (N-isopropylidene)tyrosyl hydrazone *T R Rao, Mamta Sahay and R C Aggarwal* 525–534

Synthesis of oxochlorochromates(V) *M N Majumder and A B Mitra* 535–540

Effects of various mixed aqueous solvents on the stability constants of Cu(II) chelates with piperidine 2-carboxylic acid *Christine Rebello, G Shashikala and M G Ram Reddy* 541–546

Stability of the ternary complexes of inosine in solution *P Rabindra Reddy, M Harilatha Reddy and P R Prasad Reddy* 547–556

Kinetic spectrophotometric determination of manganese *S Jagadeswara Rao, G Siva Reddy and Y Krishna Reddy* 557–560

Kinetics and mechanism of the interactions of imidazole and benzimidazole with cis-diaquo(nitrilotriacetate)cobalt(III) *M C Ghosh and P Banerjee* 561–572

Ruthenium(III) catalyzed oxidation of 1-phenylethanol and substituted 1-phenylethanol(s) by phenyliodosoacetate (PIA) *K Vijayasri, J Rajaram and J C Kuriakose* 573–578

Magnetic, spectral and thermal properties of some new coordination polymers *M N Patel and B N Jani* 579–584

Organic

Synthesis and characterization of phenolic oligomers *D J Desai, K C Patel, R G Patel and V S Patel* 275–278

Kinetics of nucleophilic substitution reactions of 1-chloromethyl-naphthalene with anilines *B H Bhide and M G Patel* 279–284

Chemical synthesis of $d(G\text{-}C)_4$, $d(G\text{-}C)_5$ and d(GGTGGACCTC) by continuous flow solid phase phosphotriester method *G V Rajendrakumar, N Sivakama Sundari and K N Ganesh* 357–368

Structure of isopropyl-N-phenyl carbamate—a plant hormone *M Nethaji and Vasantha Pattabhi* 369–374

Influence of imidazole and bifunctional nucleophiles on the micellar catalysed hydrolysis and hydroxylaminolysis of esters *P S Raghavan and Vangalur S Srinivasan* 375–380

Synthesis of some N-substituted hydrazines by the anhydrous chloramine process *S R Jain and D Chellappa* 381–389

Synthesis of some new *bis* (styryl sulphones) *M R S Naidu and R Meera Rani* 391–395

Investigations towards the synthesis of a CD-steroid intermediate *D K Banerjee, T R Kasturi, R Sai Baba and A Sarkar* 439–446

Photochemistry of the carbon-halogen bond: Some recent developments *B S Nanjundiah and H R Sonawane* 447–462

Physical and Theoretical

Structural and catalytic studies of promoted iron oxide catalysts used in the dehydrogenation of ethylbenzene to styrene *B A Sayyed, M P Gupta, S K Date, K R Kample, A Y Sonsale and A K Chatterjee* 285–290

Surface characterization of an iron oxide catalyst (ethylbenzene→ styrene): An XPS study *B A Sayyed, A K Chatterjee, S M Kanetkar, S Badrinarayanan and S K Date* 291–295

Mössbauer effect studies of the $GaCoMnO_4$-$ZnFeMnO_4$ system *Rita Ramachandran and V S Darshane* 297–301

Thermal decomposition of 2,4,N-trinitro anilino acetic acid and its esters *K U B Rao and S R Yoganarasimhan* 303–307

Thermal decomposition of some nitroanilinoacetic acids *K U B Rao and S R Yoganarasimhan* 309–314

Photoconductivity of polymers doped with some charge transfer complexes
A N Abdel Rahman, F M Abdel Kerim, H E D Higazy, A A Shabaka and M A El-Ghandoor 315–319

Correlation of x-ray photoelectron spectroscopic core level binding energies with melting point for a series of diamine dihydrochlorides
Stephen P Roe, John O Hill and John Liesegang 397–408

Correlative studies on the absorption and emission characteristics of isomeric chlorobenzonitriles *A K Maiti, S K Sarkar and G S Kastha* 409–419

Excess thermodynamic properties of the binary mixtures of ethylenediamine with isomeric butanols *S K Chaudhari and S S Katti* 421–426

Ab initio studies on the electronic structure of some substituted benzenes
O P Singh and J S Yadav 427–436

Infrared and Raman spectra of three tetrametaphosphates $M_2P_4O_{12}$ (M = Fe, Ni, Zn) *K Viswanathan, V U Nayar and G Aruldhas* 463–470

Vibrational spectra and normal coordinate analysis for substituted trifluoromethyl benzenes
R A Yadav and I S Singh 471–488

On the dissociation energy of MgH^+ molecule *N Rajamanickam* 489–492

Isothermal vapour-liquid equilibria for binary mixtures of *n*-octane with isomeric-butanols at 333·15 K *S K Chaudhari and S S Katti* 493–498

Second derivative analysis of S=O stretching band in Raman spectra of dimethyl sulphoxide in carbon tetrachloride and water
M I S Sastry and Surjit Singh 499–508

Intermolecular energy calculations on 4′-nitrophenyl 4-hexyloxybenzoate—a mesogenic compound
N K Sanyal, S N Tiwari, M Roychoudhury and S R Shukla 509–516

Letters

Influence of charge on the stability of 5′-cytidine monophosphate in solution *P Rabindra Reddy and B Madhusudhan Reddy* 229–233

A novel approach for the study of intermolecular interactions: molecular deformation densities *T N Guru Row and Shridhar R Gadre* 437–438
